PRODUCT DETAILS

Build and evaluate patient care and nurse aid competencies!

The Patient Care Manikin PRO for simulation in healthcare was developed for scenario based training of patient care and advanced nursing skills.

The patient care manikin simulates an adult, life-size patient, with interchangeable genitals. It can be positioned like a real patient with natural movement of the arms, legs, and joints. You can even make the patient care manikin sit upright in the bed for treatments. It is made of durable, unbreakable, and water-resistant plastics for longevity in the everyday training use.

The following clinical nursing and patient care skills and competencies can be trained and evaluated:
